HOW TO TEST MATERIAL FOR ASBESTOS

Safely collect sample  >  Post sample  >  microPHAZIR AS Asbestos Analyzer  >  Emailed result

For bonded material and suspected non-friable asbestos

• Lay down a plastic drop sheet to catch any loose material that may fall off while sampling.

• Turn off any fans or air conditioning if you’re inside. If outside, then sample on a non-windy day.

• Put on Class P2 respirator mask and wear a pair of disposable coveralls

1. PREPARE EQUIPMENT
2. SPRAY AREA DOWN WITH WATER
3. REMOVE SAMPLE WITH PLIERS
4. PLACE SAMPLE IN BAG & LABEL
5. PAINT EXPOSED EDGE WITH PVA GLUE

NON-FRIABLE ASBESTOS TEST KIT

SAMPLING PROCEDURE (NON-FRIABLE MATERIAL)

• Dampen down the area with the water spray bottle.

• Remove a representative sample (30mm x 30mm) of material with clean pliers. Select a sample from a corner edge or along an existing hole, crack, or behind power point. If the edge is exposed, apply PVA glue to seal any fibres.

• Place sample into a resealable plastic bag, and double bag.

• Label with the Date, Site Details, Sample Number and Sample Location.

• Post in a plastic or padded sealed envelope

The report will be emailed to you with results indicating the type of fibres present including any asbestos (eg. Chrysotile, Amosite or Crocidolite).

Sample size  If possible, please collect between a 5 and 50 cent piece of the material that requires analysis

Enclose that material in a sealed plastic bag. Repeat this process for each sample requiring analysis. Then put all bagged samples into a 2 plastic bag and seal.

Post  187 Brisbane Terrace Goodna 4300, Queensland.

Results  will be available within 60 minutes of receipt of the samples and emailed to you.

Payment  Pay upon completion via Direct Deposit or make a credit card payment over the phone
